

Anduril Industries

Series H Investment- ~\$78B Valuation

Backed By: Founders Fund & Andreessen Horowitz

The Most Consequential New Defense Company in a Generation

~\$2B

2025 Revenue

Estimated, with ~100% YoY growth

~\$4.3B

Projected 2026 Revenue

\$30.5B

Current Valuation

~\$78B round in progress

\$40B+

Contract Ceiling

Across U.S. and allied military programs

7,000

Employees

Across 34–35 global offices

Founded in 2017 by Oculus VR creator Palmer Luckey, Anduril's core thesis — that Silicon Valley software speed, AI-first architecture, and venture-backed R&D can displace the cost-plus procurement model — is being validated at scale. With the Pentagon's Replicator Initiative, allied nations rearming at historic rates, and Arsenal-1 coming online in mid-2026, Anduril stands at an inflection point between high-growth startup and emerging defense prime.

Founding Story

Anduril was incorporated in **June 2017** in Costa Mesa, California, by five co-founders with deep roots in Silicon Valley and defense. The company's name references Aragorn's sword from *The Lord of the Rings* — "Flame of the West" — with the initials "AI" nodding to its core technology.

1

Palmer Luckey

Founder of Oculus VR, sold to Facebook for ~\$2.3B in 2014.
Departed Facebook in March 2017 with \$100M+ in severance.

2

Trae Stephens

Former Palantir employee and Founders Fund partner, tasked by Peter Thiel to find "the next Palantir or SpaceX."

3

Brian Schimpf

CEO, former Director of Engineering at Palantir.

4

Matt Grimm & Joseph Chen

COO (ex-Palantir/Mithril Capital) and former Oculus hardware lead and Army National Guard paratrooper.

From First Pitch to Defense Prime

The founding model — build the product first with private capital, then sell it off the shelf — proved itself immediately with a U.S. Customs and Border Protection pilot contract. Today, Anduril operates from a 640,000 sq ft Costa Mesa headquarters (a former LA Times facility), with offices in Boston, Atlanta, Seattle, Washington D.C., London, Sydney, Tokyo, and Abu Dhabi.

Leadership: Silicon Valley Meets Washington

Christian Brose

President & Chief Strategy Officer. Former Staff Director, Senate Armed Services Committee under John McCain. Author of *The Kill Chain*.

Matthew Steckman

President & Chief Business Officer. Formerly Chief Revenue Officer at Zipline and Head of Business Operations at Palantir.

Greg Kausner

SVP Global Defense. Former Deputy Under Secretary of Defense for Acquisition & Sustainment.

This combination of Silicon Valley engineering talent with deep Washington policy expertise is central to Anduril's ability to navigate both technology development and defense procurement.

CORE TECHNOLOGY

Lattice OS: The Central Nervous System

What Lattice Does

- Real-time sensor fusion
- Autonomous target classification
- Multi-domain command & control
- Decentralized mesh network
- Operates in communications-denied environments

Why It Creates a Moat

Lattice's open architecture — with SDKs in Go, Java, TypeScript, and Python — creates powerful switching costs once deployed, while enabling integration with third-party sensors and effectors.

The U.S. Army's **\$20 billion enterprise contract** (March 2026) and selection for the **Integrated Battle Command System Maneuver** confirm Lattice as a foundational C2 platform for the American military.

Hardware Portfolio: Autonomous Air Systems

Fury (YFQ-44A)

Swept-wing collaborative combat aircraft. Mach 0.95, 50,000 ft, 9G maneuvers. Selected for Air Force CCA Increment 1 — ~**\$8.9B** program for 1,000+ autonomous fighter wingmen.

Altius Family

Tube-launched ISR and loitering munitions (600, 600M, 700M). Ranges up to **440 km**. Deployable from C-130s, helicopters, and ground vehicles.

Ghost-X & Roadrunner-M

Ghost-X selected for Army sUAS and Replicator initiative. Roadrunner-M: reusable VTOL interceptor at low hundreds of thousands vs. \$4–5M for a Patriot PAC-3 MSE. **\$250M contract** for 500+ units.

Hardware Portfolio: Maritime & Missiles

Ghost Shark XL-AUV

Royal Australian Navy program of record: **A\$1.7B (~\$1.1B)**, September 2025. First prototype delivered 12 months ahead of schedule. Deploys Copperhead family of high-speed autonomous underwater vehicles (30+ knots) functioning as autonomous torpedoes at a fraction of legacy costs.

Barracuda Cruise Missile Family

Software-defined, autonomous cruise missiles requiring only **10 tools to assemble** using commercial supply chains. Barracuda-500: 500+ nautical mile range at **~\$200K per unit** vs. ~\$2M for a Tomahawk. Targeting production of **5,000 units/year** by end of 2026.

Solid Rocket Motor Facility

Mississippi facility makes Anduril the **third U.S. SRM supplier** alongside Northrop Grumman and L3Harris/Aerojet Rocketdyne. Targeting 6,000 tactical motors/year by end of 2026 using proprietary ALITEC alloy fuel that increases range by up to 40%.

Additional Products Across Every Domain

Pulsar EW System

AI-powered electronic warfare system conceived and fielded in just **8 months** from concept.

Bolt / Bolt-M

Man-packable loitering munitions. **\$249M USMC contract.**

Sentry Towers

300+ deployed along the U.S.-Mexico border. Also deployed in UK COPCI program with 10+ Maritime Sentry Towers.

ExoAnalytic Solutions

Newly acquired (March 2026) for **space domain awareness**. Space Force contracts total ~\$135M for Space Surveillance Network modernization.

FINANCIAL PERFORMANCE

Revenue Has Doubled Every Year Since 2022

The 2024 figure of ~\$1B is the most widely corroborated across Bloomberg, CNBC, and Reuters. The 2025 figure of ~\$2B comes from a New York Times report cited by TechCrunch in March 2026. Analyst projections for **2026 cluster around \$4.3B**, driven by the Army enterprise contract ramp, CCA production decisions, Ghost Shark deliveries, and Barracuda scaling.

Software-Like Margins in a Hardware Business

Anduril Gross Margins

40–45%

Achieved through a commercial fixed-price model with high software content embedded in hardware – effectively "SaaS-like" economics on defense platforms.

Traditional Defense Primes

8–10%

Operating under cost-plus contracting with hardware-first business models. Anduril's structural margin advantage is a core differentiator for long-term value creation.

Palmer Luckey stated in October 2025 that Anduril wants to be "a profitable company before we go to the public markets."

Near-Term Capital Deployment

Arsenal-1

~\$1 billion investment in Ohio hyperscale manufacturing facility.

Mississippi SRM Facility

Solid rocket motor production scaling to 6,000 units/year.

Long Beach Campus

\$1 billion, 1M+ sq ft, 5,500 jobs. Expected mid-2027.

Heavy capital expenditures mean near-term cash burn remains significant despite the strong margin profile. These investments are the foundation of Anduril's transition from prototype company to production-capable defense prime.

FUNDING HISTORY

Valuation Has Grown 680x From Seed to Current Round

Total capital raised through Series G stands at approximately **\$6.3 billion**. The Series G was **8x oversubscribed**, with Founders Fund committing \$1 billion — the largest single check in the firm's history. An additional \$4–8B is targeted in the current round co-led by Andreessen Horowitz and Thrive Capital.

A Blue-Chip Investor Syndicate

Venture Anchors

Founders Fund (Peter Thiel), Andreessen Horowitz, 8VC (Joe Lonsdale), General Catalyst, Lux Capital

Crossover / Growth

Thrive Capital (Josh Kushner), Sands Capital, D1 Capital, Valor Equity Partners, Altimeter

Institutional

Fidelity, BlackRock, Baillie Gifford — signaling pre-IPO positioning and institutional validation

The investor base has evolved from pure venture to include major crossover institutional investors.

Valuation in Context

Anduril at ~\$78B Target

- ~**30x** trailing 2025 revenue
- ~**14x** projected 2026 revenue
- Significant premium to traditional primes (1.5–3x revenue)
- Reflects software-like margins and triple-digit growth

Palantir Comparable

The closest public comparable trades at approximately **65x forward revenue** with a \$160B+ market cap — suggesting Anduril's premium is defensible given its growth trajectory.

IPO Outlook

Palmer Luckey stated in June 2025 that Anduril will "definitely" become publicly traded, noting there "isn't really a path" to win trillion-dollar contracts without going public.

Analyst consensus places the most likely IPO window in **late 2026 to 2027**.

CONTRACT PORTFOLIO

A \$40 Billion+ Contract Ceiling

\$20B

U.S. Army Enterprise

10-year firm-fixed-price deal, March 2026. First task order: \$87M for counter-drone C2.

\$22B

IVAS Program

Novated from Microsoft in early 2025. AR headsets for up to 121,000 Army devices.

\$967M

SOCOM Counter-UAS

IDIQ won against 11 competitors in 2022. Covers Sentry Tower, Anvil, Pulsar, Foxhound.

\$5B+

Active Backlog

Conservative estimate of delivery order backlog providing multi-year revenue visibility.

Additional Major U.S. Contracts

\$642M

Navy/Marine Corps counter-drone IDIQ

\$250M

Roadrunner-M deal, 500+ units

\$249M

Bolt/Bolt-M USMC loitering munitions

\$159M

Soldier Borne Mission Command prototype

~\$8.9B

Air Force CCA Increment 1 (Anduril's share through FY2029)

\$135M

Space Force — Space Surveillance Network modernization

International Contracts: Allied Nations Rearming

Australia — A\$1.7B Ghost Shark

Flagship allied contract with the Royal Australian Navy. First prototype delivered 12 months ahead of schedule.

United Kingdom — £48M+

Force protection, border surveillance (COPCI), and a £30M Altius loitering munition supply contract for Ukraine.

UAE — EDGE Alliance

\$200M investment from EDGE Group plus initial order of 50 Omen autonomous air vehicles.

Germany — Rheinmetall Partnership

Strategic partnership targeting European variants of Fury, Barracuda, and solid rocket motors.

MARKET CONTEXT

Defense Spending Is Entering a Structural Supercycle

\$2.72T

Global Defense 2024

Up 9.4% YoY — steepest rise since at least 1988 and the 10th consecutive year of growth (SIPRI).

\$3.4T+

Projected by 2030

Global defense spending trajectory per current projections.

105%

Pentagon AI Budget Growth

Increase from 2022 to 2024. Applied AI is now among the DoD's top 6 priorities.

\$49.1B

Defense Tech VC (2025)

Record-breaking fundraising — nearly double the prior year. Institutional capital flowing aggressively into the sector.

European Rearmament at Historic Pace

Country / Bloc

NATO's new target of **5% of GDP by 2035** (set at The Hague Summit, June 2025) represents a dramatic escalation from the previous 2% floor. Poland now spends **4.48% of GDP** — the highest in NATO. Germany's budget surged to \$88.5B. Australia's AUKUS commitment totals approximately **A\$240 billion over 30+ years**.

Anduril's Core Markets Are the Fastest-Growing in Defense

Counter-UAS CAGR

Market growing from \$6.6B to \$20.3B by 2030

AI in Defense CAGR

Expected to reach \$25–33B by 2030

Replicator Non-Traditional

Share of Replicator-1 suppliers that are non-traditional defense contractors

The military drone/UAV market exceeds \$36 billion and is growing at 13.8% CAGR. Anduril's Altius-600 and Ghost-X were selected among the Replicator Initiative's core platforms — a program to field thousands of attributable autonomous systems.

COMPETITIVE LANDSCAPE

Competing Against the "Big Five" Primes

Traditional Prime Weaknesses

- Hardware-first, cost-plus business models
- Development cycles measured in decades
- 8–10% gross margins
- Organizational DNA resists rapid iteration

Anduril's Advantages

- Self-funds R&D, builds before Pentagon requests
- Iterates in months, not decades
- 40–45% gross margins
- Roadrunner: napkin to operational in under 2 years
- Pulsar EW: concept to fielded in 8 months

Defense Tech Startup Competitive Map

Palantir

\$160B+ market cap, ~\$2.8B revenue. Complementary, not competitive — pure software analytics. Shares Palantir DNA with Anduril's founders. Active partners.

Shield AI

\$5.6B valuation, ~\$300M revenue. Competes in autonomous aircraft via Hivemind AI pilot. Licenses to primes rather than building complete systems.

Saronic Technologies

\$4B valuation. Founded by Anduril alumni. Targets autonomous surface vessels.

Helsing

€12B valuation. Leads European defense AI. Geographic complement to Anduril's transatlantic expansion.

Three Pillars of Differentiation

No other defense startup operates across this breadth of domains with this level of vertical integration. Anduril is transitioning from venture-backed disruptor into a production-capable "neoprime" with software economics — a combination that has never existed at this scale.

MANUFACTURING SCALE-UP

Arsenal-I: The Critical 2026 Catalyst

Scale

5 million sq ft on 500 acres near Rickenbacker International Airport. Second-largest building in the world by sq ft at full scale.

Investment

~\$1 billion. Ohio granted a 30-year tax credit worth ~\$450M. Phase 1 (775K sq ft) completed 2025.

Production Target

Fury, Roadrunner, and Barracuda initial production: **July 2026**. 4,000+ jobs expected by 2035.

Arsenal OS: Software-Defined Manufacturing

Arsenal OS Platform

An integrated digital software-defined manufacturing platform with common commercial tooling for every type of autonomous vehicle – applying Anduril's software-first philosophy to the factory floor itself.

Two 12,000-ft Runways

75 acres of private apron at Rickenbacker enables direct flight testing of every autonomous air system produced at the facility.

Arsenal-2 on the Horizon

Chris Brose has signaled that "Arsenal-2" could follow quickly, potentially in allied territory – extending the manufacturing network internationally.

Global Manufacturing Network

Nine Acquisitions: Deliberate Vertical Integration

01

Area-I (2021)

Altius drone family

02

Dive Technologies (2022)

Autonomous submarines

03

Adranos (2023)

Solid rocket motors

04

Blue Force Technologies (2023)

Fury airframe

05

Numerica (2024)

Radars

06

Klas / AIS / ExoAnalytic (2025–26)

Tactical computing, IR cameras, space domain awareness

Each acquisition reinforces the Lattice ecosystem rather than creating disconnected product lines – a deliberate strategy to build the most vertically integrated defense technology company in history.

INVESTMENT RISKS

Risk #1: Manufacturing Execution

The most significant risk is transitioning from a software-and-prototype company to mass production at Arsenal-1 scale. This is an enormous operational challenge with no guarantee of success. Delays could inflate operating losses beyond investor tolerances and undermine the IPO thesis.

- ❏ A late-2025 Wall Street Journal investigation documented 12+ autonomous boat malfunctions during a Navy exercise, a Fury engine test failure, an Anvil test that sparked a 22-acre fire, and reports that Altius loitering drones frequently crashed and were discontinued in Ukraine in 2024. Anduril characterized these as normal parts of weapons development, but reliability at production scale remains unproven.

Risk #2: Government Concentration & Valuation

Government Concentration

Revenue is overwhelmingly tied to U.S. DoD and allied military contracts. U.S. government revenue likely still exceeds **70%**. Defense spending is inherently cyclical and politically sensitive, despite current bipartisan support.

Valuation Risk at ~\$78B

At 30x trailing revenue, if growth decelerates from its ~100% annual pace — due to contract delays, competitive losses, or manufacturing setbacks — the premium relative to defense industry norms (1.5–3x revenue) would be difficult to sustain.

Risk #3: Operational Reliability & Key Person

Operational Reliability

A separate Army internal memo described the NGC2 platform (developed with Palantir) as "very high risk" due to cybersecurity vulnerabilities. Reliability at production scale across 15 product lines remains unproven.

Key Person Risk

Palmer Luckey's public persona, political connections, and product vision are deeply intertwined with the company's brand and government relationships. Mitigated by the depth of the leadership bench — Brose, Steckman, and Kausner — and institutional partnerships.

Risk Mitigants

\$40B+ Contract Ceiling

Multi-year revenue visibility across U.S. and allied programs provides a substantial buffer against near-term setbacks.

15 Product Lines, 5 Domains

Diversification across air, land, sea, space, and cyber reduces single-program concentration risk.

40–45% Gross Margins

Structural advantage vs. primes' 8–10% provides financial resilience and investment capacity.

Lattice Switching Costs

Embedded as Army-wide C2 platform, creating structural lock-in that protects the revenue base.

INVESTMENT THESIS

Four Pillars of the Investment Case

Warfare Is Software-Defined

Software is less than 1% of DoD spending today but is the decisive factor in modern conflict. Lattice OS is the operating system layer for autonomous warfare.

Autonomous Systems Rule

The autonomous systems transition favors insurgents over incumbents. Replicator Initiative, drone dominance orders, and Golden Dome all prioritize Anduril-type systems.

Defense Spending Supercycle

NATO 5% GDP target, European defense up 42%, AUKUS A\$240B, Japan record budgets — a durable, structural increase in global defense investment.

Anduril: A "Platform" Neoprime

Arsenal-1, vertical integration, and the \$20B Army contract mark Anduril's evolution from startup to production-capable defense platform company.

Pillar 1: Software-Defined Warfare Is Inevitable

<1%

Software's share of DoD spending today – despite being the decisive factor in modern conflict.

The iOS/Android Analogy

Lattice OS positions Anduril as the operating system layer for autonomous warfare – analogous to how iOS/Android captured value in mobile. Every hardware system Anduril sells deepens Lattice's network effects and switching costs.

The U.S. Army's \$20B enterprise contract consolidating 120+ procurement actions into a single Lattice framework is the clearest evidence that this thesis is being validated at the highest levels of the U.S. military.

Pillar 2: Autonomous Systems Favor Insurgents Over Incumbents

The Pentagon's Replicator Initiative, executive orders on drone dominance, and the Golden Dome missile defense program all prioritize the type of AI-enabled, mass-producible, attributable systems Anduril builds.

Traditional primes' organizational structures, incentive systems, and cost-plus business models are optimized for exquisite, low-volume platforms — the opposite of what modern warfare demands.

Pillar 3: The Defense Spending Supercycle

NATO

5% of GDP target by 2035. European NATO investments grew **42%** in 2024 alone, reaching a record €106B.

AUKUS

Australia's commitment totals approximately **A\$240 billion over 30+ years**. Ghost Shark is the flagship program.

Indo-Pacific

Japan set a record defense budget (up 9.4% YoY). UK pledged to reach 3% of GDP by 2034.

This sustained demand creates multi-year revenue visibility across all of Anduril's product lines and international markets — a structural tailwind that is independent of any single contract or administration.

Pillar 4: From Startup to Platform Company

The Arsenal-1 factory, vertical integration via acquisitions (SRMs, sensors, radars, space awareness), and the \$20 billion Army enterprise contract collectively mark Anduril's evolution from a venture-backed disruptor into a production-capable defense prime with software economics — a combination that has never existed at this scale.

NEAR-TERM CATALYSTS

2025–2027 Catalyst Calendar

The Central Question for Investors

"Can Anduril execute the manufacturing transition while maintaining its software-like margin structure and triple-digit growth?"

The evidence — Arsenal-1 construction progress, the Army's unprecedented enterprise contract, sustained revenue doubling, and expanding international adoption — suggests the probability-weighted outcome favors continued execution, making Anduril among the most compelling pre-IPO opportunities in the current market.

Summary: Why Anduril, Why Now

Proven Growth

Revenue doubling annually since 2022. \$2B in 2025, ~\$4.3B+ projected for 2026. 40–45% gross margins vs. primes' 8–10%.

Anchored Backlog

\$40B+ contract ceiling. \$5B+ active delivery backlog. \$20B Army enterprise contract providing decade-long visibility.

Structural Tailwinds

NATO 5% GDP target, European 42% rearmament growth, AUKUS A\$240B, record Indo-Pacific budgets. Fastest-growing defense segments.

IPO Inflection

Late 2026–2027 IPO window. 8x oversubscribed Series G. Blue-chip institutional investor base.
